

Tools

In the Bitwarden Tools section, features such as how your password gets generated, importing data, exporting your vault, and pulling reports are available for customizing your instance.

Password Manager

Password Generator does exactly as it says, it generates a password. It provides the ability to set length, minimum numbers and minimum special. It also provides the ability to generate passphrases with the options to set the number of words, setting a word separator, capitalizing the words, and the ability to add a number.

If you look closely, the clock on the bottom right of the page provides a password history of the most recently generated passwords from the password generator.

Copy Password

Adding an item from the plugin also provides the ability to generate a new password when signing up using the refresh button on the password field (right most button/link in the password field):

The image shows a dark-themed 'Add Item' dialog box from a password manager. At the top, there are 'Cancel', 'Add Item', and 'Save' buttons. Below the title bar, the section is labeled 'ITEM INFORMATION'. It contains several input fields: 'Type' (a dropdown menu currently showing 'Login'), 'Name', 'Username', and 'Password' (which has a strength indicator of 10 yellow dots and icons for a checkmark, eye, and refresh). Below the password field is an 'Authenticator Key (TOTP)' field. At the bottom, there is a 'URI 1' field with a red minus icon on the left and a menu icon on the right. A 'New URI' button with a plus icon is located at the very bottom left. The background shows a blurred view of the application's main interface with various icons in the top bar.

Import Data

An undervalued tool, only likely to be used one time, the *Import Data* functionality allows you to import from a host of providers including: Bitwarden (Json, csv), Last Pass, Chrome, Firefox, KeePass 2, 1Password, Dashlane and many others.

Import Data

1. Select the format of the import file

- ✓ -- Select --
- Bitwarden (json)
 - Bitwarden (csv)
 - LastPass (csv)
 - Chrome (csv)
 - Firefox (csv)
 - KeePass 2 (xml)
 - 1Password (1pif)
 - Dashlane (json)

 - 1Password 6 and 7 Mac (csv)
 - 1Password 6 and 7 Windows (csv)
 - Ascendo DataVault (csv)
 - Avast Passwords (csv)
 - Avast Passwords (json)
 - Avira (csv)
 - BlackBerry Password Keeper (csv)
 - Blur (csv)
 - Buttercup (csv)
 - Clipperz (html)

Export Vault

What goes in may need to come out. Exporting a Bitwarden vault is as easy as setting the File Format, inputting your Master Password, and Exporting your Vault. This can be helpful for migrating to a new instance of bitwarden. Note at Compositional Enterprises we take care of your data and upgrades. These can be held for offsite backups if needed or migrating to a different provider.

Export Vault

Enter your master password to export your vault data.
